Sharing and disseminating your project

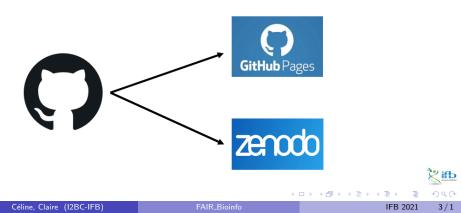

(4) (日本)

Sharing and disseminating

Goals of this session:

- Showcase your work
- Add a licence
- Create a release
- Obtain a DOI for the project

< □ > < □ > < □ > < □ > < □ >

ئانگ

Céline, Claire (I2BC-IFB)

IFB 2021 5/1

< □ > < □ > < □ > < □ > < □ > < □ >

Why?

• Your project is simpler to share and find

Advantages

- Free hosting of static websites
- Able to convert Markdown into a website

Documentation : https://pages.github.com/

In practice

From the main page of your repository, go to :

- "Settings" tab
- \rightarrow "Options" (left hand side menu)
- $\bullet \rightarrow$ navigate to the "GitHub Pages" paragraph.

GitHub Pages

GitHub Pages is designed to host your personal, organization, or project pages from a GitHub repository.

Source

Kind reminder: consequence of not choosing a licence.

No License

When you make a creative work (which includes code), the work is under exclusive copyright by default. Unless you include a license that specifies otherwise, nobody else can copy, distribute, or modily your work without being at risk of take-downs, shake-downs, or litigation. Once the work has other contributes (sech a copyright holde), "nobody" starts including you.

Even in the absence of a license file, you may grant some rights in cases where you publish your source code to a site that requires accepting terms of service. For example, if you publish your source code in a public repository on GliHub, you have accepted the Terms of Service, by which you allow others to view and fork your repository. Others may not need your permission if **limitations and exceptions to copyright apply to their particular** situation. Nother site terms nor jurisdiction-specific copyright imitations are sufficient for the kinds of colaboration that people usually seek on a public code host, such as experimentation, modification, and sharing as forstend by an open source license.

You don't have to do anything to not offer a license. You may however wish to add a copyright notice and statement that you are not offering any license in a promisent place (e.g., you'repicts READM) to be take usere don't assume you made an oversight. If you're going to accost other contributions to your non-licensed project, you may wish to explore with your lawyer adding a contributor agreement to your projects to that you maintain copyright permission from contributors, even though you're not granting the same.

Disallowing use of your code might not be what you intend by "no license." An open-source license allows reuse of your code while retaining copyright. If your goal is to completely opt-out of copyright restrictions, try a public domain dedication.

For users

If you find software that doesn't have a license, that generally means you have no permission from the creators of the software to use, modify, or share the software. Although a code host such as GitHub may allow you to view and fork the code, this does not imply that you are permitted to use, modify, or share the software for any purpose.

Your options:

- Ask the maintainers nicely to add a license. Unless the software includes strong indications to the contrary, lack of a license is probably an oversight. If the software is hosted on a site like Giffuth, open an issue requesting a license and include a link to this site. If you're bold and it's fairly obvious what license is most appropriate, open a pull request to add a license – see "suggest this license" in the sidebar of the page for each license on this site (og., HT).
- . Don't use the software. Find or create an alternative that is under an open source license.
- Negotiate a private license. Bring your lawyer.
